GREENERWAVE AND TELESPAZIO FRANCE SIGN STRATEGIC AGREEMENT TO DISTRIBUTE MULTI-ORBIT, LOW-POWER AND SOVEREIGN SATCOM TERMINALS IN EUROPE

Paris, 06/05/2026 - Greenerwave and Telespazio France, a Leonardo group company, announce the signing of a strategic agreement aimed at deploying and distributing Greenerwave's multi-orbit, energy-efficient and sovereign SATCOM terminals across the European defense and government markets.

A Partnership to Accelerate the Deployment of Innovative and Sovereign SATCOM Solutions in Europe

This agreement marks an important milestone in the adoption of innovative European technologies. It aims to strengthen access to sovereign, resilient and secure satellite communications solutions by leveraging the complementary expertise of both companies.

Under this agreement, Telespazio France, a leading European provider of high-value satellite services and applications, will distribute Greenerwave's low-power, multi-orbit (GEO/LEO) SATCOM terminals to priority government, defense and security sectors in France, across Europe and in the United Kingdom.

This collaboration reflects a shared commitment to technological innovation, joint growth and secure large-scale deployments for institutional users.

"Partnering with Greenerwave enables us to integrate cutting-edge antenna technology into our SATCOM offering and expand the range of European made solutions we deliver to our customers. This collaboration strengthens our ability to provide flexible, high-performance connectivity adapted to complex and demanding environments. It also reinforces our role as a trusted operator for critical communications, leveraging multi-orbit capabilities to ensure SATCOM service continuity for end-users engaged in critical missions." said Pierre Glatt, Sales Director at Telespazio France.

An Alliance Supporting the Sovereignty and Resilience of Satellite Communications

By combining their expertise, Greenerwave and Telespazio France aim to accelerate the deployment of a new generation of agile and resilient satellite communication solutions capable of meeting the demanding requirements of critical operations and government missions.

"This partnership with Telespazio France represents a key milestone for Greenerwave as we scale the deployment of our next-generation SATCOM terminals across Europe. By combining our breakthrough technology with Telespazio's strong presence in government and defense markets, we aim to provide sovereign, energy-efficient and resilient connectivity solutions that meet the growing operational needs of institutional users. Strengthening Europe's technological autonomy in satellite communications is at the core of our mission." said Geoffroy Lerosey, CEO and co-founder of Greenerwave.

Both companies share the ambition to contribute to strengthening Europe's strategic autonomy in satellite communications, at a time when operational continuity and the protection of critical infrastructure have never been more essential.

About Greenerwave

Greenerwave is a French deeptech company with offices in Paris, Toulouse and Sophia Antipolis. Pioneer in next-generation SATCOM user terminals, the company leverages a unique expertise in electromagnetic wave control.

At the core of its innovation lie Reconfigurable Intelligent Surfaces (RIS), combined with advanced physics-inspired algorithms that enable electromagnetic waves carrying signals to be guided efficiently and dynamically in real time. This novel approach allows the company to design electronically steerable flat antennas that deliver high-performance connectivity while significantly reducing energy consumption and reliance on semiconductors compared with conventional solutions.

Multi-orbit and compatible with all current and future satellite constellations (including OneWeb, IRIS², and others), Greenerwave's SATCOM terminals address the growing demand for secure, sovereign and resilient connectivity, combining flexibility, efficiency, technological agnosticism and reliability.

Beyond SATCOM, the company also applies its unique expertise to other strategic sectors, driving innovation in telecommunications and sensing technologies.

About Telespazio France

Based in Toulouse, Bordeaux, Paris, and Kourou, Telespazio France is a subsidiary of the Telespazio group, a joint venture between Leonardo (67%) and Thales (33%) and a key player in space infrastructure operations and value-added satellite services.

With more than 30 years of experience and nearly 500 employees, this French subsidiary of the international group covers all historical space domains, including telecommunications, Earth observation, and navigation, but also addresses emerging markets such as micro-launchers, space surveillance, or in-orbit services.

With over 150 people at the Guiana Space Centre, Telespazio France is also the leading industrial partner at the Kourou base, providing daily maintenance and operation of ground infrastructure facilities.
